double fold header

Cube Care Manufacturing Specifications

Every manufacturer has slightly different specifications for their cubicle curtains. The following are the specifications that we use the construction of our hems:

- Mesh Header – 1 ½" wide, double thick and double lock stitched
- Top Fabric Hem/Mesh Footer – Double thick and double lock stitched to mesh with a 5/8" wide seam
- Bottom Hem – 1 ¼" wide double thick and double stitched
- Side Hems – 1 ¼" wide double thick and double stitched
- Vertical Seams – ½" wide double thick and double stitched French Folds. (Many companies use sergers to unite panels. This leads to UGLY AND UNFINISHED QUALITY.)

All hems and seams are sewn with 100% mercerized polyester core thread.

Note: The way that our mesh is attached to the fabric portion differs from that of our competitors. Often you will see other cubicle curtains with the mesh sewn directly on top of the fabric. We make sure that they are first sewn together, then double stitched on top of that to create a stable and durable seam.
